7	From the INTERNATIONAL PRELIMINAF	RY EXAMINING AUTHORITY	PCT NOTIFICATION OF TRANSMITTAL OF THE INTERNATIONAL PRELIMINARY EXAMINATION REPORT (PCT Rule 71.1)			
TERMIJN	Mr Ir A.W.Prins, c.s. C/O VEREENIGDE Nieuwe Parklaan 97 2587 BN The Hague PAYS-BAS					
Beantwoord Voorl.	6 JUN 2001 Bericht gezonden		Date of mailing (day/month/year)	29.05.2001		
def. MAP	Applicant's or agent's file reference P22152PC00		IMPORTANT NOTIFICATION			
	International application No. PCT/NL00/00152	International filing date (da 08/03/2000	ay/month/year)	Priority date (day/month/year) 08/03/1999		
	Applicant STICHTING DIENST LANDB	OUWKUNDIG ONDERZOE	K et al.			

- 1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.
- 2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
- 3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

Re Item III

- The scope of claim 4 is so unclear (Article 6 PCT) that no meaningful opinion 1. could be given for said claim. A replicon of a positive-strand RNA virus comprises anyway RNA, thus such a claim does not further characterize the subject-matter of claims 1-3.
- For the assessment of the present claim 22 on the question whether it is 2. industrially applicable, no unified criteria exist in the PCT Contracting States. The patentability can also be dependent upon the formulation of the claims. The EPO, for example, does not recognize as industrially applicable the subject-matter of claims to the use of a compound in medical treatment, but may allow, however, claims to a known compound for first use in medical treatment and the use of such a compound for the manufacture of a medicament for a new medical treatment.

Re Item V

- Reference is made to the following document: 1.
 - D1: WO 98 55626 A (REILLY JOHN DAVID ; COUSSENS PAUL M (US); ORIGEN INC (US); SPATZ ST) 10 December 1998 (1998-12-10)
- The amended claims filed with the letter of 25.04.2001 appear to be allowable 2. under Articles 19(2) and 34(2)(b) PCT.
- Claim 1 relates to a porcine reproductive and respiratory syndrome virus (PRRSV) replicon having at least some of its original PRRSV nucleic acid deleted wherein said replicon comprises essential elements from the PRRSV polymerase region and is capable of in vivo RNA replication.

Document D1 refers to a recombinant PRRS virus (and its nucleic acid) wherein the ORFs 2-7 from PRRSV are linked to a heterologous polymerase gene in particular to ORFs 1a and 1b from Equine Arteritis Virus (EAV) ("abstract", p.8. 1.18-21 and/or p.9, 1.16-19). The construction of such a nucleic acid (replicon) is

described in "Example 3" and one possible example of such a replicon is the plasmid p4B, shown in Fig.3B.

The difference between the subject-matter of the present application and D1 is that the replicon of the present application comprises essential elements from the own polymerase region whereas the replicon of D1 comprises the polymerase gene from EAV. Due to this difference the subject-matter of claim 1 appears to be novel over D1 and over the remaining cited prior art documents.

However, the subject-matter of claim 1 lacks an inventive activity (Article 33(3) PCT) for the following reasons:

As mentioned above, the only difference between the replicon of the application and D1 is the origin of the polymerase gene. From the disclosure it is not clear what advantage a replicon which has its polymerase gene would have over a replicon containing a heterologous polymerase gene. Since the intention for the use of the replicon in the present application and D1 is the same, namely to use it for vaccination, it appears that it has even disadavantages over the replicon of D1. According to page 12 (I. 13-15) of D1 the EAV RNA polymerase appears to have an increased fidelity. This property is clearly positive for vaccination purposes. Hence, a replicon having a higher mutation rate for vacciniation against PRRSV appears not to solve any clear technical problem and thus claim 1 is not in accordance to Article 33(3) PCT.

- Claim 2 which does not relate to a PRRSV replicon comprising its own 4. polymerase gene but merely to a replicon comprising nucleic acid derived from at least one heterologous micro-organism lacks even novelty over D1 (Article 33(2) PCT). The PRRSV replicon of D1 having the polymerase gene of another virus, namely EAV falls within the scope of claim 2.
- The available prior art appears not to disclose that the 5' noncoding region-5. ORF1a-ORF1B-ORF7-3' noncoding region is essential for in vivo RNA replication. Furthermore, replicons having mutations in the gene encoding the M-protein or modifications leading to amino acid changes in ORF2, 3, 4, 5 and/or 6 or modifications in a virulence marker of PRRSV are also not described or suggested in the cited prior art. Hence, claims relating to said subject-matter, i.e., claims 5-9

- and 11-15 would be in accordance to Article 33(2) and (3) PCT if they would not refer to claim claims 1-4.
- Claims 10 and 16-22 referring to the replicon as specified in claims 1-4 do not 6. satisfy the requirements of Article 33(2) and/or (3) PCT. D1 describes also recombinant PRRSV containing a marker which allows the identification of the recombinant PRRSV (p.16, l.1-6). The recombinant virus/replicon of D1 contains nucleic acid parts derived from EAV which is a pathogenic virus for horses. Furthermore, it is stated in D1 that the described nucleic acid constructs are used to produce a vaccine for protecting swine from infection by PRRSV (p.9, l.1-3 and claim 41).

Claims 10 and 16-22 would only be in accordance to Article 33(2) and (3) PCT if they would restrict to replicons characterised with specific technical features which are not known from the prior art, e.g. replicons as defined in claims 5, 6, 8, 9 and 11-15.
